ENZYMATIC TEST KIT FOR THE DETERMINATION OF AMMONIA IN GRAPE JUICE AND WINE

PRODUCT

Product no. 4A120, for 30 tests, for in vitro use only

PRINCIPLE OF MEASUREMENT

Ammonia is found in both grape juice and wine. It is an important nutrient for yeast during primary fermentation. It is determined enzymatically according to the following equation:

GIDH

 α -ketoglutarate + NADH + NH₄⁺ \leftrightarrow L-glutamate + NAD⁺ + H₂O

Ammonia reacts with α -ketoglutarate and reduced nicotinamide adenosine dinucleotide (NADH) in the presence of glutamate dehydrogenase (GIDH) to form L-glutamate and NAD. The amount of NADH consumed is measured at 340 nm and is stoichiometrically related to the amount of ammonia present. The **Yeast Available Nitrogen** (YAN) content of the juice can be determined by adding the Ammonia Nitrogen (AN) content to the Primary Amino Acid Nitrogen (PAAN) content. PAAN can be determined by Vintessential Laboratories Analysis Kit 4A110.

CONTENTS

The kit includes the following reagents:

Reagent No.	Reagent	Preparation	Quantity	Stability
1	Buffer	Nil	33 mL	2 years at 4°C
2	NADH	Add 1.7 mL of distilled water to either bottle as required, mix to dissolve	2 x 1.7 mL	2 years at 4°C (1 month at 4°C once diluted)
3	GIDH	Mix gently by inversion before use	0.7 mL	2 years at 4°C
4	Standard	Nil	3.3 mL	2 years at 4°C

The shelf life of Reagent 1 can be extended by placing aliquots in a freezer.

Do not freeze reagents 2 or 3.

Failure to store reagents at the recommended temperature will reduce their shelf life.

For concentration of Standard, refer to label on bottle.

SAFETY

- Wear safety glasses
- Do not ingest Buffer or Standard as they contain sodium azide as a stabilizer

PROCEDURE

Operating Parameters

Wavelength 340 nm

Cuvettes 1cm, quartz, silica, methacrylate or polystyrene

Temperature $20 - 25^{\circ}$ C Final volume in cuvette 3.12 mL

Zero against air without cuvette in light path

Issued 01/10/2023 4A120 Page 1 of 2

SAMPLE PREPARATION

Samples should be diluted with distilled water to ensure concentration in the assay solution is no more than 40 mg/L (ppm). Ideally, A₁ should lie between 0.90 – 1.20 absorbance units.

For samples with less than 200 mg/L of Ammonia, a 1 in 5 dilution should be sufficient.

For samples containing between 200 – 400 mg/L of Ammonia, a 1 in 10 dilution would be appropriate.

Undiluted red wines or highly coloured undiluted juice samples require decolourisation. To decolourise, add approximately 0.1 g of PVPP to 5 mL of sample in a test tube. Shake well for about 1 minute. Clarification is achieved by settling or filtering through Whatman No. 1 filter paper.

SAMPLE ANALYSIS

a. Pipette the following volumes of reagents into the cuvettes:

Reagent	Blank	Standard	Sample
1. Buffer	1.00 mL (1000 µL)	1.00 mL (1000 µL)	1.00 mL (1000 µL)
2. NADH	0.10 mL (100 µL)	0.10 mL (100 µL)	0.10 mL (100 µL)
Distilled water	2.00 mL (2000 µL)	1.90 mL (1900 µL)	1.90 mL (1900 µL)
Sample/Standard	, , ,	0.10 mL (100 µL)	0.10 mL (100 µL)

- b. Mix well and read absorbances, A₁, once constant (approximately 5 minutes).
- c. Pipette the following reagent into the cuvettes:

3. GIDH	0.02 mL (20µL)	0.02 mL (20µL)	0.02 mL (20µL)

d. Mix well and read absorbances, A₂, once reaction is complete (approx 20 minutes).

CALCULATIONS*

1. Calculate the Net Absorbance for the Blank, Sample and Standard:

Net Absorbance, $A_N = A_1 - A_2$

2. Calculate the Corrected Absorbance by subtracting the Net Absorbance for the Blank from the Net Absorbance for the Sample.

Sample Corrected Absorbance, A_C = Sample A_N – Blank A_N

- 3. Do the same for the Standard by substituting the Standard absorbance values in place of the Sample absorbance values.
- 4. Calculate the Ammonia concentration as follows;

Ammonia (mg/L) = $A_C \times 84.3 \times Dilution Factor$

5. Calculate Ammonia Nitrogen as follows;

Ammonia Nitrogen (mg/L) = Ammonia (mg/L) \times 0.82

To calculate YAN (Yeast Assimilable Nitrogen), simply add Ammonia Nitrogen (AN) to the Primary Amino Acid Nitrogen (PAAN) calculated from kit 4A110:

YAN = PAAN + AN
